FHI: Vision and national goals

Better health for all

Several public health reports and national health strategies set the public health goals in Norway:

- Norway shall be among the top three countries with the highest life expectancy in the world
- The population shall experience more years of good health and well-being
- We shall create a society that promotes good health throughout the entire population and reduces social inequalities in health
- Norway shall contribute to better health globally

To achieve these goals we need

- Broad knowledge-based public health work
- Equal access to innovative and knowledge-based health and care services that are safe, effective and of high quality

Social mission

Norwegian Institute of Public Health

Our social mission is to produce, summarise and communicate knowledge to contribute to good public health work and good health and care services.

In this way FHI contributes to better health in Norway and globally.

FHI: Core tasks and areas of expertise

FHI: Core tasks and areas of expertise

Specific Objective 1:

Improve evidences for developing adequate health policies at local and national level

- A.2. Health Needs Assessment at local level & Community Health Profile (FHI together with WHO)

Thank you!
